

Sleek Audio Goes Wireless, Creates True CD-Quality Sound Using Kleer Wireless Technology

Four People Can Now Listen To One Audio Stream Using Sleek Audio Wireless Earphones

Cupertino, CA, June 11, 2008 – Sleek Audio (www.sleek-audio.com), a developer of innovative, high fidelity earphones, and Kleer™ (www.kleer.com), a fabless semiconductor company focused on wireless audio applications, announces that Sleek Audio will use Kleer technology to develop wireless earbuds that offer CD-quality audio, robust ISM band coexistence and ultra low power consumption. In addition, Kleer's point to multi-point Listen in™ technology will be incorporated, which enables up to four people each with a set of Sleek Audio earbuds to simultaneously listen to the same audio stream. All Kleer-based products are fully interoperable, enabling the Sleek Audio earbuds to receive wireless audio from any Kleer-based portable media player.

“It has always been our goal to develop a wireless application that would work seamlessly with all of our earphones and working with Kleer has allowed us to do so without sacrificing sound quality,” said Jason Krywko, VP of Sleek Audio. “With Kleer, wireless technology has finally caught up with the level of quality our earphones provide, and our first demo of our wireless SA6's at CanJam2008 received incredible reviews. It's great when audiophiles are blown away, that's when you know you've really done something special.”

“Kleer is very excited to be collaborating with Sleek Audio as it develops its new wireless earphone design,” said Ron Glibbery, VP of Marketing for Kleer. “Sleek Audio has proven that there is a large customer base who is demanding high-quality wireless earphones with extended battery life, ideal for people who want to listen to music at work or at the gym.”

The release date for the Sleek Audio wireless application is currently set for Q4 2008 at which time pricing and distribution will also be announced.

About Sleek Audio

Sleek Audio is a personal audio company dedicated to creating “Music in Tune with You.” Creators of the first ever acoustically customizable earphones, Sleek Audio are driven from decades of experience in the custom hearing aid and audio industry. Sleek Audio products are designed for high-performance use with all MP3 players including iPod® and Zune®. For more information, visit the company website at www.sleek-audio.com.

About Kleer

Kleer is a fabless semiconductor company that has developed the first wireless audio technology to combine high quality audio and robust ISM band coexistence with low power consumption to address portable, home and automotive audio markets. Unlike Bluetooth, Kleer's patented subsampling radio architecture was designed from the ground up to communicate lossless CD-quality digital stereo audio over a robust 2.4GHz radio link, while achieving 10 times the battery life of a comparable Bluetooth solution. Kleer's Audio LP technology is ideally suited for OEMs of portable audio players, iPod® and other player accessories, home audio/theater systems, earphones, headphones, and speakers. Kleer distributes its products via direct sales in North America, and a distribution channel in Korea and Japan. The Company is headquartered in Cupertino, California with product development facilities in Ottawa, Ontario. For more information, contact the company at 19925 Stevens Creek Blvd. Suite 111, Cupertino, CA, 95014, Tel: 408-973-7255, Fax: 408-973-7256, Email: info@kleer.com, or visit the company web site at www.kleer.com
